

The Re-Livestock project is collaborating in the organisation of the XI REMEDIA Network Workshop (<https://www.redremediaworkshop.org/>), an event that will bring together leading experts, researchers and members of society interested in addressing the challenges facing the agriculture, livestock and forestry sectors in the context of emission mitigation.

Under the title "Reconnecting agriculture, livestock and forestry towards climate neutrality: A meeting of Iberian science and society", this Workshop, to be held on 23-24 May 2024 in Plasencia (Cáceres, Spain), will represent a space for in-depth reflection and constructive dialogue on the future of emissions mitigation in the agriculture, livestock and forestry sector.

XI remedia workshop

"Reconectando agricultura, ganadería y silvicultura hacia la neutralidad climática. Un encuentro de la ciencia y sociedad ibéricas"

23-24 Mayo 2024

**Ubicación: Centro Universitario de Plasencia,
Calle Virgen del Puerto, 2, 10600 Plasencia (Cáceres)**

The REMEDIA Network is presented as a forum with more than 10 years of history for the search for science-based solutions to mitigate the impact of climate change in the agriculture, livestock and forestry sectors. Recognising the complexity of these sectors, as well as the need to address them from a multidisciplinary perspective, the REMEDIA Network has established itself as a critical player in promoting sustainable practices and disseminating scientific knowledge for the sector.

The objectives of the REMEDIA Network are clear and ambitious: to serve as a channel for the dissemination and transfer of scientific and strategic information, to promote collaborative studies, to actively involve socio-economic agents and to explore the compatibilities between mitigation and adaptation to climate change, among others. Through tools such as our blog, annual scientific workshops and joint research projects, REMEDIA positions itself as a key player in the Spanish and international scientific community.
